

LeWM-VC — Machine-Native Video Compression

LeWM-VC is a new AI-native video codec that compresses video directly into a machine-friendly latent representation. It reduces bandwidth and storage by over 60% while improving ML model accuracy at low bitrates.

Architecture Overview

Value Proposition

- 62% P-frame bitrate reduction
- Improved semantic class accuracy vs H.265
- 80+ FPS on commodity GPUs
- Ideal for surveillance, robotics, and industrial vision systems
