

LeWM-VC

Machine-Native Video Compression

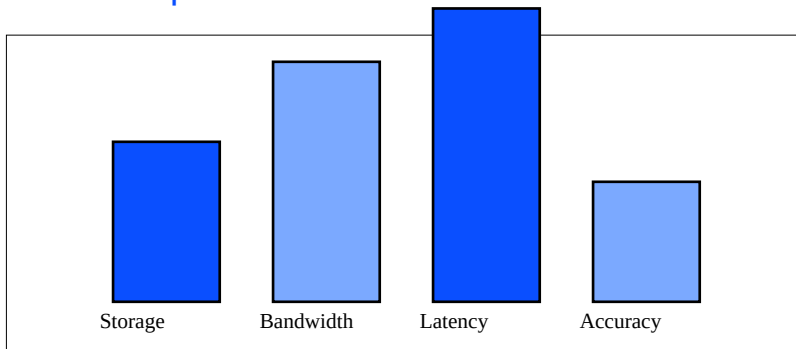

Overview

LeWM-VC is a next-generation video codec built for machine perception—not human viewing. It compresses video directly into compact latent representations that preserve semantic detail while cutting storage and bandwidth costs by more than 60%.

Architecture

Value Proposition

- 62% P-frame bitrate reduction
- +7.2 pp semantic accuracy vs H.265 at matched bitrate
- Real-time (80+ FPS) on T4-class GPUs
- Ideal for surveillance, robotics, and industrial ML pipelines
