

LeWM-VC: Machine-Native Video Compression

AI-native codec reducing bandwidth/storage for machine video while improving ML signal fidelity.

Problem

- Existing codecs optimize for human perception, not ML.
- Storage and bandwidth costs are exploding.
- Pixel reconstruction destroys semantic detail at low bitrates.
- Enterprises run detectors on frames never viewed by humans.

Why Existing Codecs Fail

- Pixel fidelity is the primary objective.
- Motion vectors fail on non-rigid motion.
- Full-frame decode adds latency and GPU cost.
- Semantic quality collapses under compression.

Solution: LeWM-VC

- AI-native latent-space video codec.
- No motion vectors.
- JEPA-based temporal prediction.
- GMM entropy model for compact latent coding.
- Real-time performance on commodity GPUs.

Architecture Overview

- ViT-Tiny encoder $\rightarrow$ $192 \times 16 \times 16$ latent.
- JEPA temporal transformer predictor.
- 2-component GMM entropy model.
- Adaptive surprise-gated quantization.
- Lightweight ConvTranspose decoder (optional).

Key Results

- 62% P-frame bitrate reduction.
- +7.2 pp semantic class accuracy vs H.265 at matched BPP.
- 80+ FPS on T4.
- 14.7M parameters (edge-deployable).

Market

- Surveillance, industrial, robotics, smart city.
- Hundreds of millions of cameras deployed globally.
- \$8–12B compression + machine-video infrastructure market.

Business Model

- Enterprise SDK licensing.
- Cloud/edge API usage-based billing.
- OEM licensing for camera and VMS vendors.

Go-To-Market

Phase 1: Surveillance + industrial pilots, VMS integration.

Phase 2: Edge hardware partnerships, OEM licensing.

Phase 3: Expansion to robotics and autonomous systems.

Competitive Advantage

- JEPA-based codec: no motion vectors.
- Latent-native ML workflow.
- Superior semantic retention.
- Real-time performance.
- Patentable architecture.

Team

Deep expertise in JEPA, ML systems, video compression, and GPU optimization.

Ask

Raising \$2.5M Seed.

Use of funds: model scaling, SDK/API productization, pilots, hiring ML + systems engineers + GTM.
