

— OUR MISSION —

Compressing the Future of Industrial Intelligence.

*Becoming the Essential IP Moat
for the Machine-Vision Ecosystem.*

The Industrial Data Deluge.

Remote industrial sites generate massive visual data but face severe bandwidth bottlenecks.

Satellite and VSAT connections are expensive and constrained.

Current codecs are designed for human eyes, not machine algorithms.

Beyond Human Vision.

We optimize for machine accuracy, not human aesthetics.

Preserving critical features for AI.

First-mover in remote industrial machine-vision compression.

HUMAN VISION
— *Squinting at a Blurry Feed* —

VS.

MACHINE VISION
— *Identifying What Matters* —

— OUR DUAL-LAYER MOAT —

Our Dual-Layer SVC Moat.

Scalable Video Coding (SVC)
architecture creates a technical barrier.

Optimized for
edge processing.

Focus on
machine-to-machine
communication.

— OUR STRATEGY —

Standardizing the Future: MPEG VCM

Engaging with MPEG VCM
working group.

Filing core patents to become
an essential IP holder.

Turning standardization risks
into a dominant market position.

— MARKET OPPORTUNITY —

The Satellite Gateway.

Satellite and VSAT providers are our natural partners.

Gateway hardware is a delivery mechanism.

Our compression IP is the product.

High-margin licensing model.

— CHANNEL STRATEGY —

Proven Channel Strategy.

Following successful channel models like Videosoft.

Direct integration into industrial IoT and remote monitoring.

Rapid acquisition through established VSAT networks.

— DE-RISKING THE TECHNOLOGY —

De-risking the Technology.

VIRAT licensing mitigation:
Training on permissive datasets.

Patent-first approach
to protect against obsolescence.

Agile IP pivot
ensures relevance regardless
of hardware.

— STRATEGIC PIVOT —

The IP Licensing Pivot.

Moving from hardware-dependent solutions to a pure-play IP licensing model.

Capturing value across the entire VCM ecosystem.

Scalable growth without physical manufacturing overhead.

— VISION —

The VCM Essential IP Holder.

- ✦ Building the fundamental layer for all future industrial machine vision.
- ✦ Securing a position as the “Intel Inside” for machine-vision compression.
- ✦ Unlocking the next wave of remote industrial automation.

— SEED ROUND —

Seed Round: Join the Vision.

Raising seed capital to
accelerate patent filings
and MPEG engagement.

Expanding engineering
team for dual-layer
SVC development.

Partnering with
early-adopter satellite
providers.
